SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE	DELIVERY MODE
3 MONTHS	04/10/2007	PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

Office Action Summary

Application No.

10/699,073

Applicant(s)

YOSHIKAWA, KEN

Examiner

Bobbak Safaipoor

Art Unit

2618

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on Applicant's Arguments filed on 1/25/2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-22 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-22 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 30 October 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Applicant's arguments filed 1/25/2007 have been fully considered but they are not persuasive. **Claims 1-22** are still pending in the present application. **This action is made FINAL.**

Response to Arguments

In the present application, Applicant essentially argues that the issuance of a data request from a mobile communication device dependent upon a user-designated time condition is neither taught nor suggested in **Straub et al (United States Patent Application #5,905,492)**.

Examiner respectfully disagrees. Independent claim 1 states, which is also a common element recited in independent claims 1, 8, 18, 20, 21 and 22, "a data request controller for controlling transmission of the data request to the server depending on a user-designated time condition." Straub teaches that an update service of the server performs recurring updates by downloading updating resources from a server computer, connected, via a network, to the theme-enhanced computer. The update service performs the updating at scheduled intervals, at times that the user is otherwise connected to the network, or on other bases. For example, when the user is connected to the network, this is the scheduled interval (user-designated time condition) to download themes. If the user is not connected to the network, then the themes cannot be downloaded. Straub discloses that the theme provider is an individual that provides the periodically updating theme as a service to the user on the computer. (col. 7, lines 7-21) A provider (i.e. individual) may continually change the updating resources residing on the server so

Art Unit: 2618

as to make new enhancements, which are consistent with the theme continually available to the theme-enhanced computer. (col. 3, lines 53 to 64) The recited claim language is given the broadest reasonable interpretation; therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention that the “user-designated time condition” could be interpreted as the updating scheduled intervals, wherein the “user” is an individual, as described above.

Applicant also argues that **Tanaka (UK Patent Application GB 2 372 587 A)** does not show or suggest that the data request controller holds the transmission of a data request to the server when at least one communication or internal processing function is operating in the mobile communication, as stated in dependent claim 5.

Examiner respectfully disagrees. Tanaka discloses a method for downloading from the Internet for a wireless device when a connection is made all the data due for a download are accessed in turn (read as data controller holds) and updated information is downloaded to the PDA (read as at least one communication or internal processing function is operating in the mobile communication device) (page 6, second paragraph).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 9-13, 15, and 18-22 are rejected under 35 U.S.C. 102(b) as being anticipated by **Straub et al (United States Patent Application #5,905,492)**.

Consider **claim 1**, Straub et al clearly show and disclose a system for delivering data from a server to a mobile communication device through a network, wherein the server (col. 7, line 10-15; figure 2; Theme Server) comprises:

a data memory for storing a plurality of pieces of data (col. 7, lines 9-13; col. 10, lines 1-8; The theme server is a server computer on the network which is managed by a theme provider, and stores a group of resources for one or more themes supplied by the theme provider); and

a server controller controlling such that a piece of data is selected from the data memory in response to a data request received from the mobile communication device and a selected piece of data is transmitted back to the mobile communication device (col. 7, lines 13-17, 22-27; The theme provider provides the periodically updating theme as a service to the user of the computer. Software at the computer automatically downloads new theme resources from the theme server to update the locally stored resources of the themes. The newly downloaded resources can replace the theme's resources which were previously stored locally at the computer), and

Art Unit: 2618

the mobile communication device (col. 5, lines 6; fig. 1; Computer) comprises:

an output device (col. 5, lines 34-36; figure 1; The output device can comprise a display, a printer, a transducer, etc);

a memory (col. 5, lines 19-22; figure 1; The memory system generally includes high-speed main memory in the form of a medium such as RAM and ROM);

a data request controller for controlling transmission of the data request to the server depending on a user-designated time condition (col. 3, lines 50-52; col. 7, lines 22-24; Software at the computer automatically downloads new theme resources from the theme server to update the locally stored resources of the themes. The updating service automatically performs the updating at scheduled intervals at times that the user is otherwise connected to the network); and

a controller controlling such that the selected piece of data downloaded from the server is stored in the memory, wherein the selected piece of data is reproduced by the output device (col. 5, lines 10-14; col. 6, lines 31-35, 45-50; figure 1; The CPU includes an ALU for performing computations, a collection of registers for temporary storage of data and instructions, and a control unit for controlling operation of the system. The computer locally stores one or more groups of multi-media resources ("themes") in its memory system. The resources in the illustrated themes include still images, video, sounds, animations, text, and the like stored as a file or files. The resources of each theme enhance the graphical user interface of the computer's operating system by altering various sensory elements of the interface).

Consider **claim 2**, and as applied to **claim 1** above, Straub et al show and disclose the claimed invention wherein each piece of data stored in the data memory includes image data and

Art Unit: 2618

sound data (col. 6, lines 31-35; The computer locally stores multi-media resources in its memory system, such as still images, video, sounds, animations, text, etc), wherein

the output device comprises an image displaying section and a sound outputting section (col. 5, lines 34-36; The output device can comprise a display, a printer, a transducer (e.g. a speaker), etc); and

the controller controls such that the image data of the selected piece of data is displayed on the image displaying section and the sound data of the selected piece of data is reproduced by the sound outputting section (col. 5, lines 34-36; figure 1; The control unit controls the operation of the system, including the operation of the output device, which can comprise a display, a printer, a transducer (e.g. a speaker), etc).

Consider **claim 3**, and **as applied to claim 1 above**, Straub et al show and disclose the claimed invention wherein the user-designated time condition is at least one date and time, at which the data request controller transmits the data request to the server (col. 3, lines 50-52; The update service automatically performs the updating at scheduled intervals, at times that the user is otherwise connected to the network).

Consider **claim 4**, and **as applied to claim 1 above**, Straub et al show and disclose the claimed invention wherein the user-designated time condition is a time period, wherein the data request controller transmits the data request to the server at intervals of the time period (col. 3, lines 50-52; The update service automatically performs the updating at scheduled intervals, at times that the user is otherwise connected to the network).

Consider **claim 9**, and as applied to **claim 1** above, Straub et al show and disclose the claimed invention wherein the data request controller is implemented by executing a Java application using the selected piece of data, wherein the Java application is downloaded from the server (col. 12, lines 17-31; figure 5; The information pane comprises a content area where the computer plays live or locally cached information retrieved from servers on the Internet or computer network, which include hyperlinks and embedded software components, such as Java applets).

Consider **claim 10**, Straub et al show and disclose the claimed invention wherein a method for delivering data from a server to a mobile communication device through a network, comprising:

at the mobile communication device, determining a transmission condition of a data request depending on a user's instruction; transmitting the data request to the server when the transmission condition is met (col. 3, lines 50-52; col. 10, lines 1-8; The updated service automatically performs the updating at scheduled intervals, at times that the user is otherwise connected to the network);

at the server, storing a plurality of pieces of data (col. 7, lines 9-13; col. 10, lines 1-8; The theme server is a server computer on the network which is managed by a theme provider, and stores a group of resources for one or more themes supplied by the theme provider); receiving the data request from the mobile communication device; selecting a piece of data from the data memory in response to the data request; transmitting a selected piece of data to the mobile

Art Unit: 2618

communication device (col. 7, lines 13-17, 22-27; The theme provider provides the periodically updating theme as a service to the user of the computer. Software at the computer automatically downloads new theme resources from the theme server to update the locally stored resources of the themes. The newly downloaded resources can replace the theme's resources which were previously stored locally at the computer);

at the mobile communication device, storing the selected piece of data downloaded from the server in a memory; and reproducing the selected piece of data (col. 5, lines 10-14; col. 6, lines 31-35, 45-50; figure 1; The CPU includes an ALU for performing computations, a collection of registers for temporary storage of data and instructions, and a control unit for controlling operation of the system. The computer locally stores one or more groups of multimedia resources ("themes") in its memory system. The resources in the illustrated themes include still images, video, sounds, animations, text, and the like stored as a file or files. The resources of each theme enhance the graphical user interface of the computer's operating system by altering various sensory elements of the interface).

Consider **claim 11**, and as **applied to 10 above**, Straub et al show and disclose the claimed invention wherein the server stores Java applications, wherein the transmission condition of a data request is determined by: downloading a Java application from the server; and setting the transmission condition in the Java application, wherein the Java application is executed in the mobile communication device to download a necessary piece of data from the server (col. 12, lines 17-31; figure 5; The information pane comprises a content area where the computer plays live or locally cached information retrieved from servers on the Internet or

Art Unit: 2618

computer network, which include hyperlinks and embedded software components, such as Java applets).

Consider **claim 12**, and as **applied to claim 10 above**, Straub et al show and disclose the transmission condition of a data request is at least one date and time, at which the data request is transmitted to the server (col. 3, lines 50-52; The update service automatically performs the updating at scheduled intervals, at times that the user is otherwise connected to the network).

Consider **claim 13**, and as **applied to claim 10 above**, Straub et al show and disclose (col. 3, lines 50-52; The update service automatically performs the updating at scheduled intervals, at times that the user is otherwise connected to the network).

Consider **claim 15**, and as **applied to claim 10 above**, Straub et al show and disclose the claimed invention wherein each piece of data includes image data and sound data, wherein the image data of the selected piece of data is displayed on a display and the sound data of the selected piece of data is reproduced by a speaker immediately after the selected piece of data has been downloaded from the server (col. 5, lines 34-36; figure 1; The control unit controls the operation of the system, including the operation of the output device, which can comprise a display, a printer, a transducer (e.g. a speaker), etc).

Consider **claim 18**, Straub et al show and disclose a mobile communication device connected to a server through a network, comprises:

an output device (col. 5, lines 34-36; figure 1; The output device can comprise a display, a printer, a transducer, etc);

a memory (col. 5, lines 19-22; figure 1; The memory system generally includes high-speed main memory in the form of a medium such as RAM and ROM);

a data request controller for controlling transmission of a data request to the server depending on a user-designated time condition (col. 3, lines 50-52; col. 7, lines 22-24; Software at the computer automatically downloads new theme resources from the theme server to update the locally stored resources of the themes. The updating service automatically performs the updating at scheduled intervals at times that the user is otherwise connected to the network);; and

a controller controlling such that a piece of data downloaded from the server is stored in the memory, wherein the piece of data is reproduced by the output device (col. 5, lines 10-14; col. 6, lines 31-35, 45-50; figure 1; The CPU includes an ALU for performing computations, a collection of registers for temporary storage of data and instructions, and a control unit for controlling operation of the system. The computer locally stores one or more groups of multimedia resources ("themes") in its memory system. The resources in the illustrated themes include still images, video, sounds, animations, text, and the like stored as a file or files. The resources of each theme enhance the graphical user interface of the computer's operating system by altering various sensory elements of the interface).

Consider **claim 19**, and as **applied to claim 18 above**, Straub et al show and disclose the claimed invention wherein the piece of data includes image data and sound data, wherein the output device comprises an image displaying section and a sound outputting section (col. 5,

Art Unit: 2618

lines 34-36; The output device can comprise a display, a printer, a transducer (e.g. a speaker), etc),

wherein the controller controls such that the image data of the selected piece of data is displayed on the image displaying section and the sound data of the selected piece of data is reproduced by the sound outputting section (col. 5, lines 34-36; figure 1; The control unit controls the operation of the system, including the operation of the output device, which can comprise a display, a printer, a transducer (e.g. a speaker), etc).

Consider **claim 20**, Straub et al show and disclose the claimed invention wherein a server for delivering data to a mobile communication device through a network, comprising:

a data memory for storing a plurality of pieces of data (col. 7, lines 9-13; col. 10, lines 1-8; The theme server is a server computer on the network which is managed by a theme provider, and stores a group of resources for one or more themes supplied by the theme provider); and

a server controller controlling such that a piece of data is selected from the data memory in response to a data request received from the mobile communication device and a selected piece of data is transmitted back to the mobile communication device (col. 7, lines 13-17, 22-27; The theme provider provides the periodically updating theme as a service to the user of the computer. Software at the computer automatically downloads new theme resources from the theme server to update the locally stored resources of the themes. The newly downloaded resources can replace the theme's resources which were previously stored locally at the computer).

Consider **claim 21**, Straub et al show and disclose the claimed invention wherein a computer program instructing a computer to download data from a server to a mobile communication device through a network, comprising:

determining a transmission condition of a data request depending on a user's instruction; transmitting the data request to the server when the transmission condition is met (col. 3, lines 50-52; col. 10, lines 1-8; The updated service automatically performs the updating at scheduled intervals, at times that the user is otherwise connected to the network);

receiving a piece of data as a response to the data request from the server; storing the piece of data in a memory; and reproducing the selected piece of data (col. 5, lines 10-14; col. 6, lines 31-35, 45-50; figure 1; The CPU includes an ALU for performing computations, a collection of registers for temporary storage of data and instructions, and a control unit for controlling operation of the system. The computer locally stores one or more groups of multi-media resources ("themes") in its memory system. The resources in the illustrated themes include still images, video, sounds, animations, text, and the like stored as a file or files. The resources of each theme enhance the graphical user interface of the computer's operating system by altering various sensory elements of the interface).

Consider **claim 22**, Straub et al clearly show and disclose a computer program instructing a computer to deliver data to a mobile communication device through a network, comprising: storing a plurality of pieces of data; receiving a data request from the mobile communication device; selecting a piece of data from the data memory in response to the data request; transmitting a selected piece of data to the mobile communication device storing a plurality of

Art Unit: 2618

pieces of data (col. 7, lines 9-13; col. 10, lines 1-8; The theme server is a server computer on the network which is managed by a theme provider, and stores a group of resources for one or more themes supplied by the theme provider); receiving the data request from the mobile communication device; selecting a piece of data from the data memory in response to the data request; transmitting a selected piece of data to the mobile communication device (col. 7, lines 13-17, 22-27; The theme provider provides the periodically updating theme as a service to the user of the computer. Software at the computer automatically downloads new theme resources from the theme server to update the locally stored resources of the themes. The newly downloaded resources can replace the theme's resources which were previously stored locally at the computer);

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.

4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 5, 6, 8, 14, and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Straub et al (United States Patent Application #5,905,492)** in view of **Tanaka (UK Patent Application GB 2 372 587 A)**.

Consider **claim 5**, and as applied to **claim 1** above, Straub et al disclose the claimed invention except for wherein the data request controller holds the transmission of a data request to the server when at least one communication or internal processing function is operating in the mobile communication device.

However, Tanaka discloses as known in the art a method for downloading from the Internet for a wireless device (abstract) when a connection is made all the data due for a download are accessed in turn and updated information is downloaded to the PDA (read as at least one communication or internal processing function is operating in the mobile communication device) (page 6, second paragraph).

Therefore, it would have been obvious of one of ordinary skill in the art to incorporate the teachings of Tanaka into the system of Straub et al to enable the PDA to have enhanced functionality.

Consider **claim 6**, and as applied to **claim 1** above, Straub et al disclose the claimed invention except for wherein the controller controls such that the selected piece of data is reproduced by the output device immediately after the selected piece of data has been downloaded from the server.

Art Unit: 2618

However, Tanaka discloses as known in the art wherein the automatic download scheduling routine checks the time from the internal clock of the PDA to determine whether the routine has been started because it is time to download files according to the user defined schedule. If the routine determines that it has been initiated because a download is scheduled, then the routine progresses to a connection stage. When a connection is made all the addresses due for a download are accessed in turn and updated information is downloaded to the PDA (page 6, first and second paragraph).

Therefore, it would have been obvious of one of ordinary skill in the art to incorporate the teachings of Tanaka into the system of Straub et al to enable the PDA to have enhanced functionality.

Consider **claims 8 and 17**, and as **applied to claim 1 above**, Straub et al show and disclose the claimed invention expect wherein the server controller selects a piece of data from the data memory depending on a predetermined sequence.

However, Tanaka discloses as known in the art wherein the automatic download scheduling routine checks the time from the internal clock of the PDA to determine whether the routine has been started because it is time to download files according to the user defined schedule. If the routine determines that it has been initiated because a download is scheduled, then the routine progresses to a connection stage. In the event of failure to make a connection on the first attempt, three attempts in total are permitted. When a connection is made all the addresses due for a download are accessed in turn and updated information is downloaded to the PDA (read as predetermined sequence) (page 6, first and second paragraph).

Art Unit: 2618

Therefore, it would have been obvious of one of ordinary skill in the art to incorporate the teachings of Tanaka into the system of Straub et al to enable the PDA to have enhanced functionality.

Consider **claim 14**, and as **applied to claim 10 above**, Straub et al show and disclose the claimed invention except for at the mobile communication device, determining whether at least one function is operating in the mobile communication device; when at least one function is operating, holding the transmission of a data request to the server until no function is operating.

However, Tanaka discloses as known in the art a method for downloading from the Internet for a wireless device (abstract) when a connection is made all the data due for a download are accessed in turn and updated information is downloaded to the PDA (read as at least one function is operating in the mobile communication device) (page 6, second paragraph).

Therefore, it would have been obvious of one of ordinary skill in the art to incorporate the teachings of Tanaka into the system of Straub et al to enable the PDA to have enhanced functionality.

Claims 7 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Straub et al (United States Patent Application #5,905,492)** in view of **Yeh (United States Patent #6,675,010 B1)**.

Consider **claims 7 and 16**, and as **applied to claim 1 above**, Straub et al show and disclose the claimed invention except for wherein the server controller randomly selects a piece of data from the data memory.

However, Yeh discloses as known in the art a mobile communication system for receiving information by means of a mobile communication device through RF linkage, wherein a user requests information from the central computer mainframe. The central computer mainframe will randomly select information from the database and sent the information to the mobile communication device of the user.

Therefore, it would have been obvious of one of ordinary skill in the art to incorporate the teachings of Yeh into the system of Straub et al to utilize the mobile communication device for receiving random information relating to a topic of the user's choice.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

Any response to this Office Action should be **faxed to (571) 273-8300 or mailed to:**

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Hand-delivered responses should be brought to

Customer Service Window
Randolph Building
401 Dulany Street
Alexandria, VA 22314
